

Luna ZeroDrop™

– Taking tools safely to new heights

Luna
JUST IMAGINE

TAKING TOOLS SAFELY TO NEW HEIGHTS

Now it's easier and faster to secure your tools when working at height. With Luna ZeroDrop™, simply choose any tool you think best suits your task – then choose the fall protection solution that exactly matches your tool.

Luna ZeroDrop™ makes it easy to secure your tools

- 1** *Choose the right tool for the job*
- 2** *Choose the right fall protection*
- 3** *Put it together*

Here at Luna, our goal is to make your life safer and easier. With the market's widest range of well-known brands and tool concepts, we are constantly striving to be a complete supplier for everyone who works in the industry.

What is Luna ZeroDrop™?

CUSTOMISED FALL PROTECTION FOR THE TOOL YOU NEED

It can be time-consuming finding safe and practical ways to secure your tools. We have therefore used the knowledge we have gained over 100 years of development, production and application of tools to develop ideal solutions for working at height. We have analysed, tested and measured and found solutions that we believe

are best suited to exactly the product you need or want. We have based our approach on developing fall protection options without changing the design of the tool. The solutions have been made as simple as possible in terms of weight and the practical work the tool will be used for.

WIDE RANGE OF TOOLS – WIDE RANGE OF FALL PROTECTION

With over 10,000 tools in stock, we are familiar with the design of many different tools and brands. We can therefore offer good solutions that cover the majority of your fall protection needs and that already include the most commonly used tools – and we are expanding and developing our range all the time.

DIFFERENT NEEDS – DIFFERENT SOLUTIONS

Different working environments have different requirements for the kind of fall protection you should choose. Environments with heat, welding flames, acids or chemical substances will of course affect fall protection products over time. Sharp metal edges also contribute to greater wear. We have taken this into consideration and offer products in different materials that best suit your workplace.

Which environment do you work in?

- Risk of heat, weld spatter, grinding spatter or sharp metal edges – use steel wire.
- Risk of acids or chemical products – use materials made of acid-proof steel.

Working environments with flames and sharp edges require wire.

We recommend using elastic lanyards as long as the working environment allows it.

A COMPLETE RANGE OF FLEXIBLE SOLUTIONS

Our product range consists of individual components that can be combined to provide a customised fall protection solution, whatever your needs and requirements.

Tether

Swivels

Our smart tool swivels fit most rotary hand tools and do not affect operation of the tool.

U-clamps

These are acid-proof clamps in different dimensions designed to fit many tools with a hole, or any another shape which provides a natural fixing point. The nut has a chemical friction lock which prevents opening. After moving the clamp between tools 3-5 times, this function will deteriorate and we recommend that it should be replaced.

Retaining rings

These rings are a good fit for any product with a waist or hole where the ring can be fitted to ensure better and simpler tethering for lanyards or wire.

Tape and holders

Not all tools have an optimal securing point. Our range includes a variety of holders with a D-ring, as well as reinforced self-amalgamating tape which makes this an incredibly robust and simple solution for securing your tools.

Lanyards and wire

Lanyards and straps

Choose between nylon straps or different forms of elastic web lanyards and spiral straps. All are fitted with some form of fastening device on the end. Textile lanyards have many benefits due to their low weight, flexibility and ergonomics. They are used when there is no risk of sharp objects or open flames.

Acid-proof wire

Acid-proof fall protection wires are available in different dimensions and lengths. They are used when there is a risk that the steel wire will be exposed to sharp objects or open heat.

Reels

Tools reels for attaching to belts. The wire has a core of acid-proof wire with a swivel on end to prevent the wire from twisting. Available in different versions with and without a stop.

Wrist straps

	Item no.	Designation:
	264680406	WRIST STRAP W/D-RING
	264900408	WRIST STRAP W/VELCRO
	264900705	WRIST STRAP VELCRO/FLEX

Recommended tool weight max. 2 kg

Elastic and web lanyards

	Item no:	Designation:

3 steps to Luna ZeroDrop™ – a quick guide to securing tools

1 Choose the right tool for the job

2 Choose the right fall protection

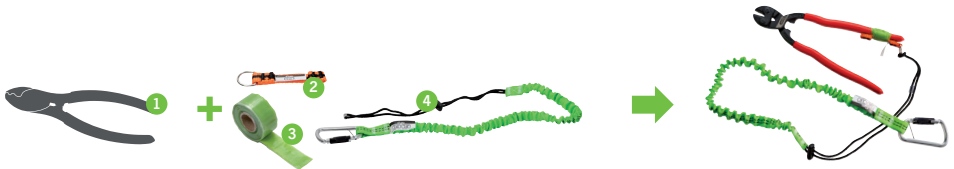

Fall protection for every tool. Choose the tether and lanyard/wire to match your working environment.

Tool	<p>Rotary tool</p>	<p>Tool with a waist</p>	<p>Tool with a hole or neck</p>	<p>Tool with a closed handle</p>	<p>Tool with an open handle with no hole</p>
	<p>Swivel</p>	<p>Retaining ring U-clamp Shackle</p>	<p>Retaining ring U-clamp</p>	<p>U-clamp Retaining ring Tape/holder</p>	<p>Tape Various holders</p>
Lanyard or wire	<p>- Heat generation - Weld splatter - Sharp metal edges - Chemicals</p> <p>Acid-proof wire withstands the most demanding environmental conditions</p>		<p>- Construction - Woodwork - Carpentry - Painting</p> <p>Web lanyards are lightweight, extremely flexible and ergonomic</p>		

③ Put it together

HOW TO ATTACH HOLDERS WITH TAPE

① First wrap the tape around the tool a couple of times ② Then lay the holder with the “seams” facing up ③ Wrap tightly, but not so tight that you destroy the properties of the tape ④ Attach the lanyard.

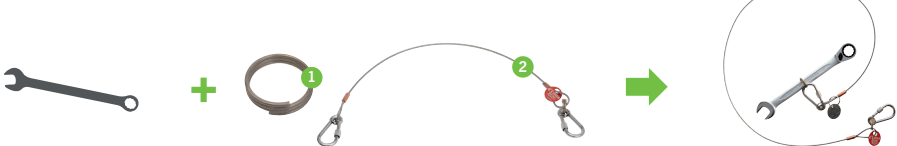

HOW TO ATTACH SWIVELS AND SCREWDRIVERS

① Attach the swivel to the screwdriver ② Tighten both screws ③ Attach the lanyard.

HOW TO ATTACH RINGS AND SPANNERS

① Attach the ring to the spanner ② Attach the lanyard.

Accessories

Connectors

The range includes a variety of different connectors such as swivels, shackles, quick links, acid-proof snap hooks and lightweight aluminium hooks. Snap hooks are available in a variety of different sizes and with different locking mechanisms.

Belts and bags

Whether you need to store your tools in a backpack or secure them on a tool belt, we can offer the perfect solution.

Nets

Nets are designed to act as backup protection for falling objects. They can be set up under or around the work area.

Why Choose Luna ZeroDrop™?

SAVE TIME – TOOL AND FALL PROTECTION IN ONE

Safety in your workplace can never wait. Luna gives you access to both tools and accessories that guarantee your safety. With ZeroDrop™, you can simply fasten the fall protection to the tool itself and you will avoid long delivery times.

LUNA ZeroDrop™ FOR THE TOOLS YOU ALREADY OWN

We have taken the time to find universal solutions. Even though they are based on the wide range of Luna tools, they can just as well be used on the majority of other tools with the same dimensions.

We are happy to help!

ZeroDrop™ online or in store

Regardless of whether you are online or in a physical store, you have easy access to our fall protection solutions. We have made tool fall protection easy to view, both online and in store, so it is easy to find the right fall protection solution for your needs.

Would you appreciate a workplace visit?

We are happy to come and offer tips and advice about how you can make your working day safer when using hand tools at height. Please contact us for a chat with no obligation!

Help for specific challenges

At Luna we develop products and ranges to make your working day safer. Do you have any special challenges or see the need to customise products even more? Contact your nearest dealer so together we can see how we can help you – we always appreciate a challenge here at Luna!

*You know which hand tool you need
– we know which fall protection is best!*
